DETAILED ACTION

The numbering of claims is not in accordance with 37 CFR 1.75(f) which requires that if there are several claims, they shall be numbered consecutively in Arabic numerals. Mis-numbered claims 6-20 are renumbered 5-19, respectively. The claim dependency of claim 19 is updated to read "the method of claim 13" in order to reflect the renumbering.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 14-19, drawn to a cosmetic gel, classified in class 424, subclass 401.
- II. Claim 13, drawn to a process of making a cosmetic gel, classified in class 424, subclass 401.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. For example, Langlois (US Pat. 5,853,712) discloses a process for making emulsions comprising mixing cyclomethicone, acrylates, water, and

Art Unit: 1617

emulsifier (see Table I; col. 12, line 52 through col. 15, line 25) where the temperatures and mixing conditions differ from the claimed process.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Claims 1-19 are generic to a plurality of disclosed patentably distinct species comprising 1) acrylate copolymer, 2) aliphatic hydrocarbon solvent, 3) volatile silicone derivative, and 4) non-ionic emulsifier. The vast number of species encompassed by the claims constitutes a serious burden on the Examiner. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of each of the four categories, even though this requirement is traversed. By single species is meant a single compound or polymer in each category. The compound or polymer can be identified by the following: 1) by naming the compound or polymer according to IUPAC standards, 2) by pictorial representation, 3) by identifying all of the variables of a formula, or 4) by identifying an example or claim that sets forth a single compound or polymer for each of the four categories.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 1617

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention and an election of species to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
